Centrodyne silent 610 installation manual full word

News Items (updated occasionally) NIST Handbook 44 Regulations Obsolete Taxi Meters - Don't Get Burned On The Net! Operators Manual for Centrodyne Meters 600 Series Operators Manual for Centrodyne Meters S700 Operators Manual for Pulsar 2030 or older 2020 Taximeters Preventing Stolen Rides By Competitors Professional Meter Shop Package of Information, CD's, Troubleshooting Tips and More Programming and Calibration - What's the Difference? Wiring: Red=A+, Black=Ground, White=VSS Input, Green=Toplight Relay Drive Output. Your browser will redirect to your requested content shortly. Please wait a few seconds. ● Self programmable fare structure (no calculations required) ● Automatic calibration ● Rate lock-out when hired ● Programmable tax rate and method ● Fare and tax totals display ● Fare inhibit above speed threshold ● Eight (8) independent rates ● Auto rate change based on fare, distance, and time of day ● Additional relay drivers output for roof lights ● Programmable display time-out ● Seven (7) digits statistics display ● Daily erasable statistics ● Password protection ● RS232 communication port ● Signal divider/amplifier included ● Sensors: electronic, magnetic or mechanical Manuals & Guides VSS Location Troubleshooting To connect a taximeter you need power, ground and the VSS wire. Vehicle Speed Sensor (VSS) The vehicle speed sensor, or VSS wire is normally a part of a vehicle's speedometer array. The VSS wire is used by the vehicle's cruise control to determine the vehicle's speed and it sends a series of pulses, anywhere from 800 to just over 1,000 per mile, and sends these pulses only when the car is in motion. A Pulse Divider enhance the signal, and it is required when the VSS pulses are too high or too low for the taximeter to read accurately. If the VSS wire is not hooked up, then the taximeter will not realize that the car is moving at all, and will be unable to track distance. To find the VSS wire in your car, you can either refer to your car documentation, visit your electric-mechanic garage or ideally your town's meter shop. Alternatively, VSS signals can be read from the OBD port directly from your car's computer using an OBD-VSS device. centrodyne meters page centrodyne silent 610 page home page Pulsar Taximeter page * We no longer sell new meters but are in a support and end-of-life mode * Please note that telephone support for S600 issues is very limited. You may find the user manuals in the support section of this website. You may copy this one page for your driver's use if you copy it in its complete form.
